ASSEMBLY STEPS

STEP 1 — FIT THE ABUTMENT PIERS

1. Lay the left and right side panels and the back panel on a padded surface as shown.
2. Thread or press the Abutment Piers (2) into the metal inserts on the top edges of the side panels and back panel (see diagram).
3. These spacers receive the long top screws later. Make sure each pier seats fully and stands straight.

STEP 2 — BUILD THE BASE FRAME

1. Stand the back panel upright.
2. Align the side panels to the back panel; engage the pre-installed fittings and tighten as indicated in the diagram.
3. Confirm the edges are flush and the base stands level without rocking.

STEP 3 — INSTALL THE DRAWER BRIDGE

1. Position the drawer unit/bridge between the side panels, aligning the holes.
2. From the rear/top, fasten using Screws M6×30 (3). Start all screws first, then tighten evenly with the Hex Wrench (4).
3. Do not overtighten. The unit should sit square and centered.

STEP 4 — MOUNT THE TOP & FIT DRAWERS

1. Place the Top panel (5) on the frame, aligning the holes over the abutment piers.
2. Insert Screws M6×110 (1) down through the top and into the piers. Start all four, then tighten evenly.
3. Attach the Handles (7) to the Drawers (6) using the small handle screws (from inside the drawer).
4. Slide the drawers onto the runners until they click/stop.

FINAL CHECKS

- All screws are tight and the top is level.
- Drawers slide smoothly and close fully.
- No gaps between panels; the table does not wobble.

CARE & SAFETY

- Do not stand or sit on the top.
- Clean with a soft cloth and mild soap only.
- Re-check screw tightness after the first week of use and after moving the unit.
- If something doesn't align, loosen, realign, and retighten rather than forcing parts. For assistance, contact your seller with your model number and clear photos.
